Weight: 985.00g
Dimensions: 300.00mm x 210.00mm x 15.00mm

Price: \$80.00

Short Description

Portraying the tailed amphibians of Europe, North Africa, and western Asia, this is the first volume of the Terralog series to be dedicated to a group of amphibians.

Description

Salamanders and Newts of Europe, North America and Western Asia (Terralog 21) portrays the tailed amphibians of Europe, North Africa, and western Asia. Particular emphasis lies on the fire salamanders whose distribution range almost equals the region covered by Salamanders and Newts of Europe, North Africa and Western Asia. Other representatives of this polymorphic order of vertebrates, on the other hand, such as the cave salamanders or olms, inhabit only very small and very particular natural habitats.

Over and above a representative photographic overview, Salamanders and Newts of Europe, North Africa and Western Asia provides photographs of eggs, larvae and juveniles as well as illustrations of different natural habitats. Forty-two distribution maps complement this photographic portrait. Each pictorial account is complemented by a symbol-based descriptive summary of the individual husbandry requirements of the respective species in human care. Containing more than 540 full-colour photographs, Salamanders and Newts of Europe, North Africa and Western Asia is a valuable photographic reference for both the scientist and terrarium enthusiast that bears impressive testimony of the character and natural beauty of the portrayed newts and salamanders.
