Snake Venoms and Envenomations

Brand:
Product Code: 153
Availability: 10
Weight: 0.00kg
Dimensions: 0.00cm x 0.00cm x 0.00cm

Price: $85.00

Short Description
An extensive guide to envenomations, venoms and the emergence of various diagnostic and pharmaceutical products derived from them.

Description
Snake Venoms and Envenomations. Snakes responsible for severe envenomations are considered a real public health problem, especially in tropical countries. Yet, snake venom, which is made up of hundreds of specific substances, is used more and more in biomedical research and as a diagnostic tool. This text presents a synthesis of the principal discoveries on venoms and envenomations. Knowing the biology and behaviour of snakes leads to a better identification of the circumstances of snakebites and thus supports prevention efforts. Recommendations and algorithms of treatments are proposed. This reference also lists all the antivenins produced in the world and the antivenomous plants with their therapeutic properties.
