Availability: 2

Weight: 1,280.00g

Dimensions: 155.00mm x 215.00mm x 35.00mm

Price: \$150.00

Short Description

A truly comprehensive guide to the tailed amphibians of the genus *Salamandra*.

Description

The Genus *Salamandra* focuses on the history of Fire Salamander research from ancient times until the early 20 th century by Schmidtler, recently discovered infectious diseases by Pasmans/Martel and 20 years of research on *Salamandra algira* by Sergé Bogaerts. The book describes literally every aspect related to *Salamandra*. The natural history is described in detail and a focus (one beside others) is set on conservation breeding, an aspect that becomes more and more important).

The species chapters cover *Salamandra salamandra* in the Iberian peninsula, *Salamandra s. alfredschmidti*, *Salamandra s. almanzoris*, *Salamandra s. bejarae*, *Salamandra s. bernardezi*, *Salamandra s. crespoidi*, *Salamandra s. fastuosa*, *Salamandra s. gallaica*, *Salamandra s. longirostris*, *Salamandra s. morenica*, *Salamandra s. beschkovi*, *Salamandra s. glioli*, *Salamandra s. salamandra*, *Salamandra s. terrestris*, *Salamandra s. weneri*, *Salamandra algira*, *Salamandra a. algira*, *Salamandra a. spelaea*, *Salamandra a. splendens*, *Salamandra a. tingitana*, *Salamandra corsica*, *Salamandra infraimmaculata*, *Salamandra i. infraimmaculata*, *Salamandra i. orientalis*, *Salamandra i. semenovi*, *Salamandra a. atra*, *Salamandra a. aurorae*, *Salamandra a. pasubiensis*, *Salamandra a. prenzensis*, and *Salamandra lanzai*. Since the authors' fascination for these beautiful tailed amphibians primarily results from the unexceptional morphological variety, this aspect is a major part of the book and described by a compilation of the best photographs available.
